

# BlockPegnio

Real Games on Blockchain

## Short

BlockPegnio is a gaming innovation company on a mission to accelerate the adoption of blockchain-powered features into the mainstream gaming industry.

## Boilerplate

BlockPegnio is a gaming innovation company with mission to accelerate the adoption of blockchain-powered features into the mainstream gaming industry. The company's portfolio currently consists of The Six Dragons, the first blockchain-powered open-world RPG on Ethereum network, and Crafting Simulator, a gamified companion app that will complement the gaming experience on the go.

## Full

BlockPegnio is a blockchain gaming innovation company currently in development of The Six Dragons, the first blockchain-powered open-world RPG on Ethereum network, and Crafting Simulator, a gamified companion app that will complement the gaming experience on the go.

In 2019, BlockPegnio's flagship project, The Six Dragons, gained significant traction from the gaming and developers' community following the first blockchain prototype release 48 hours after the launch of the Unity SDK by the Enjin Platform. As the first successful implementation, the game was showcased during the Gamer's Developer's Conference (GDC) in March 2019 at San Francisco from Enjin's CTO, Witek Radowski. In May 2019, the game raised \$172.000 in only two weeks during the first product crowdfunding round. Supporters received in-game blockchain assets for their contribution, marking one of the most successful blockchain game asset sales in the post-ICO hype era.
